

REPAIR

INTERNAL RECONSTRUCTION SYSTEM

TECHNICAL GUIDE

Everybody, sooner or later, sees their hair damaged, fragile & dull. The continuous exposition to atmospheric aggressions, chemical services & mechanical & thermal stresses during styling sessions, put hair fibre to the test. Hair becomes weak, fragile & loses its natural vigour & splendour. The use of Repair Reconstruction System is the right answer to an increasing demand for deep nourishment & reconstruction.

REPAIR

KT COMPLEX

INTERNAL RECONSTRUCTION SYSTEM

REPAIR

INTERNAL RECONSTRUCTION SYSTEM

Rich, rapid & revolutionary internal repairing system. Dermatologically tested with **KT Complex formula**, a concentrate of amino acids as the base of this revolutionary repairing system specifically formulated for damaged & sensitive hair.

Keratin in Tensive Complex: An exclusive concentrate of 20 different amino acids, thanks to which hair finds renewed balance, strength & softness. Low molecular weight proteins are able to penetrate deeply, ensuring optimal reconstruction of the cortex (inner part) while those with high molecular weight repair the cuticle (most external part).

STAGE 1 - Shampoo

The first action of the Screen Hair Repair Internal Reconstruction System

Apply to wet hair. Gently massage. Rinse, repeat this process twice. Towel Dry ready for stage 2.

- pH: 4.5
- MWS 120 - 2,000

STAGE 2 - Deep Treatment

The second action of the Screen Hair Repair Internal Reconstruction System

Apply Stage 2 thoroughly through the entire length of the hair and process for 5 mins, comb through prior to rinsing. Rinse hair thoroughly & towel dry ready for stage 3.

- pH: 6-7
- MWS 120 - 10,000

STAGE 3 - Final Treatment

The third & last action of the Screen Hair Repair Internal Reconstruction System

Apply Stage 3 to the entire length of the hair, leave in for 3-5 minutes. Rinse thoroughly. Style as desired.

- pH: 4.5
- MWS 1,000 - 10,000

COLOUR SERVICES

BLEACHING - Repair should be used after you have processed your lightening service (bleach) & prior to toner application.

Complete Stages 1-3, then apply toner.

OXIDATIVE COLOUR - It is recommended the Screen Repair is applied 7 days after an oxidative colour service.

Stage 2 has a pH of 6-7 which could cause the hair to swell too much, and you could experience colour shift.

RECOMMENDED USE

Stage 1, 2 & 3 - Use weekly for 4 weeks, then Stage 2 as needed. If washing the hair more than once a week, use only Stage 1 & 3.
